

Physician Education Express

Supply Chain Disruption of Arrow Triple Lumen Kits

Audience: Adult and Pediatric Inpatient, Outpatient, ED

Education Level - **Red**

December 22, 2016

SUMMARY

There has been a disruption in supply of the current Arrow triple lumen kits (ASK-45703-PCHS1) and you will be seeing a similar sub option (CDC-45703-XP1A). The catheter for the sub is exactly the same and includes a lot of the same insertion components. The differences are below:

- Packaging is in a new ergonomically design instead of a bag
- There is a 3ml Chloraprep instead of a 10.5ml Chloraprep
- No Needleless connectors so these will have to be pulled separate
- Standard Central Line Insertion Checklist instead of IU Health Checklist
- The sub kit includes a BioPatch
- No filter straw

Please [click here for Teleflex® Arrow® Ergopack™ System](#) component poster. Below are pictures and a cross reference of the sub kit.

Highlights

Key Points:

IU Health will be using this substitute over the new few weeks and fast tracking new kit.

This new substitute kit contains a Biopatch and a standard insertion checklist (*NOT an IU Health checklist*).

- DO NOT USE BIOPATCH
- OBTAIN AN IU HEALTH CHECKLIST

Component List (Triple and Quad Lumen)	Current Kits ASK-45703-PCHS1	SUB KIT 45703-XP1A	CDC-
Triple/Quad Lumen Catheter, 20cm	x	x	
Packaged in Bag Configuration	x	x	
Ergonomically Designed Kit	(bag kit)	x	
Pressure Injectibility for CT purposes	x	x
